

HEATH REINHARD

Documentation Engineer · AI Evaluation · Documentation Analytics · AI-Era Knowledge Ops

Folsom, CA | 718.541.3367 | heath.reinhard@gmail.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Documentation Engineer with 7+ years in technical documentation, data analytics, and knowledge systems, remote preferred. Over 4+ years fully remote at Meta, I was the first in the company to quantify AI consumption of documentation at the per-document level, inventing retrieval and citation metrics now adopted as company-wide standards. I proved that AI answer quality is predictable from the characteristics of retrieved documents alone, enabling the team to improve agent performance by fixing docs rather than models. I also built a closed-loop eval-driven quality flywheel that lifted pass rates by 9.3pp across supported products, and built the first per-product documentation health pipeline, driving coverage from 44.1% to 73.9% across 600+ internal products.

EXPERIENCE

Documentation Engineer — Meta *Remote - Nov 2021 - Present*

- **Designed and shipped a Documentation Health Analytics Platform** covering 600+ internal products, architecting the pipeline from product registry through aggregation to a real-time dashboard. Drove doc coverage from 44.1% to 73.9% in a single half (~70% relative lift); now the company-wide OKR reference.
- **Built and launched the AI Doc Consumption Dashboard** — the measurement layer for AI-driven documentation strategy across 300M+ retrievals, 54M+ distinct documents, and 19 document types — unifying telemetry across three internal AI agent platforms. Now the canonical company source for measuring AI vs. human documentation consumption.
- **Pioneered AI-documentation metrics** — first in the company to quantify AI consumption of docs at the per-document level, inventing retrieval and citation metrics now adopted as company-wide standards. Surfaced the inflection point that AI consumption surpassed human consumption, driving shifts in content and engagement strategy and shaping the function's two-year AI roadmap.
- **Proved that AI answer quality is predictable from the characteristics of retrieved documents alone**, enabling the team to improve agent performance by fixing docs rather than models.
- **Built and productionized a closed-loop documentation quality flywheel** — gap detection, source-grounded fixes, review routing, publishing, and re-evaluation — driven by online evaluation of production AI agent trajectories. Processed 35,724 user prompts across 49 products, surfaced 914 gaps, generated 1,189 LLM-drafted remediations at \$0.33 per gap, and drove a +9.3pp lift in eval pass rate across supported products. Judge pipeline: frozen 5-dimension rubric, kappa = 0.86 across 3,000 calibration calls, verdict-balanced calibration set methodology.
- **Published a 10-skill Claude Code plugin suite** to the internal AI-coding-assistant marketplace covering the full doc-quality lifecycle: gap analysis, gap drafting, content cleanup, content health scoring, RAG evaluation, production eval, golden-dataset generation, report synthesis, and semantic clustering. Now standard tooling for documentation teams across the company.
- **Led metrics strategy for the documentation team**, defining measurement standards, setting North Star goals and OKRs, and mentoring colleagues in SQL and dashboard development. Promoted 3 times in 4 years (Junior -> Staff).

Museum Guide / Staff Writer — Living Computers: Museum + Labs *Seattle, WA - Apr 2017 - Jul 2020*

- Created technically accurate content with engineers and historians to make vintage computing systems legible to lay and expert audiences; developed user guides across written, video, and live formats. Ran the museum's blog, social platforms, and editorial strategy.

SKILLS

Data & Analytics: SQL, Presto, documentation analytics, metrics strategy, dashboard development

AI & Evaluation: LLM evaluation, LLM-as-judge methodology, RAG evaluation, golden datasets, inter-rater agreement (Cohen's kappa), verdict-balanced sampling, eval pipeline design, coverage gap analysis, prompt engineering, agent orchestration, Claude Code skills

Documentation & Strategy: Documentation engineering, technical communication, knowledge management, information architecture, wiki strategy, software documentation, technical writing

Domains & Leadership: People Products, HR technology, knowledge engineering, AI/LLM evaluation infrastructure, cross-functional coordination, project management, mentorship

EDUCATION

B.A. Philosophy — The Colorado College, Colorado Springs, CO
